

SOLID MOLD FOUNDRY EXPANSION PLANNED FOR 2011 / 2012

Early technical successes on several very complex and high visibility programs are accelerating demand for our Solid Mold products. In anticipation of significantly higher Solid Mold sales in 2012 and beyond, Cera-Met has begun the process of expanding the Solid Mold foundry to make more room for additional burnout ovens and streamline production flow. The first stage of the expansion occurred during our summer shutdown in August 2011. The project is expected to be completed in 2012.

The expanded foundry will be located in the former warehouse area of the plant. We have leased warehouse space close to the plant and have moved materials such as tooling, ingots and refractory to the new site.

This is an exciting time for Cera-Met, reflecting strong customer confidence and our commitment to the future.

For more information and the latest status of this initiative, please contact Keith Chamberlain, General Manager, at 610-266-0270.
